

Project engineer

(fulltime)

About Lab Associates

We are an international supplier and producer for plant tissue culture ("PTC") and seed breeding laboratories since 1987. Our customers produce a large variety of plants in their labs and farming operations, and are located in over 40 countries worldwide. Lab Associates is a one-stop shop for its specific customer target group and can build and equip a complete laboratory. Our focus is on core products such as automated systems, media preparators, dispensing machines, autoclaves, culture vessels, laboratory tools, biochemicals and agar.

Our company culture characterizes itself best as a fast-paced, innovative, entrepreneurial, and an open and multi-cultural environment. We specifically look for new colleagues that fit our culture and can help us grow internationally!

What are your activities

You will take the lead, with support from our wider team, on continuous product improvements, process automations, and new technological innovations for both plant and seed breeding labs as well as plant factories.

You will work in this versatile and varied position on things such as:

- Continuously improving and developing as well as solving (potential) issues related to existing equipment
- The designing, building, testing and continuous development of new technological innovations / equipment
 - These responsibilities cover all phases of development, from brainstorming and evaluating concepts through troubleshooting and support
- Manage the budget and timeline of your projects
- Generate appropriate high-quality technical documentation (e.g. manuals, drawings, diagrams, FAT results)
- Work with different internal/external stakeholders and suppliers

Who are we looking for

- This is a junior position for someone with less than 3 years of working experience *and* a strong passion for AgTech and developing solutions that can support a sustainable long-term future for our planet
- You graduated with (minimum) a BSc degree, preferably in mechatronics, mechanical engineering, electrical engineering or similar
- You have strong analytical and communication skills
- You are able to manage your own projects
- You are a real team player with excellent English language skills (written and verbally)
- You are pro-active, stress resistant, outgoing, and have a hands-on mentality
- You like challenges

What can we offer you?

- Dynamic, fast and innovative environment with 'scaleup' mindset
- A flat hierarchy and informal culture with direct lines of communication
- Good employment conditions (salary, holidays, pension contribution)
- Financial support for relocation expenses available
- Active employee association, monthly Friday afternoon drinks, and (semi-)annual company events
- Opportunities and budget for further training and development
- The management has a broad international and business experience

Interested in becoming part of our team and helping with the rapid growth? Send your motivation and CV by email to jobs@labassociates.com.

Acquisition by external (consultancy and recruitment) companies in response to this vacancy is not appreciated.
